

# MADE SUSTAINABLE

Products for hospitals  
and the people in hospitals

# LEADING IN THE HOSPITAL MARKET

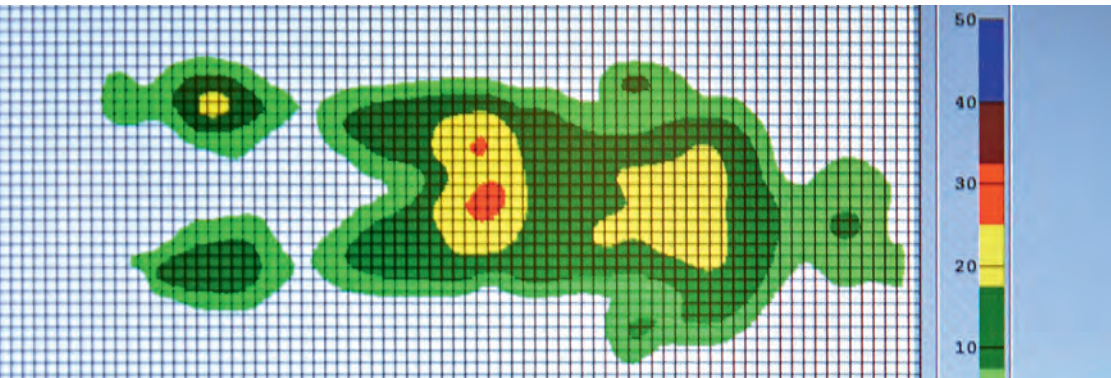

»Perfectly thought-out, functional in application and extremely durable: products developed for the needs of hospitals and the people in them.«

We have been active in the hospital market for over 30 years. The satisfaction of our customers is our highest priority. More than 40% of all German hospitals rely on the quality and reliability of Wulff Med Tec.

PRESSURE RELIEF TESTS

## SCIENCE AND PRACTICE

»We develop our products together with experts: Scientists at TU Berlin and nurses of the BG Trauma Clinic Ludwigshafen.«

The quality of viscoelastic mattresses is based on the right combination of foams density and compression hardness. To optimize our products, we scientifically tested more than 250 foam combinations.

# VERSATILE AND INNOVATIVE

»Through our holistic and conceptual approach the combination of mattress and positioning aid results in an efficient therapy system.«

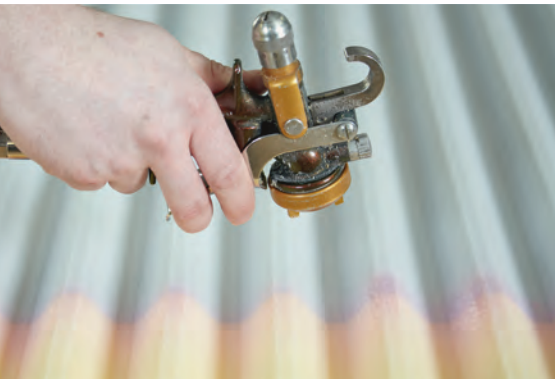

Wulff Med Tec offers mattresses for all specialist departments – from the normal to the intensive care unit – with an interlocking product portfolio that facilitates everyday hospital life and effectively supports therapeutic measures.

## THOUGHT OUT INTO THE LAST DETAIL

»Thanks to the special contour cut, the foam layers of the mattress interlock perfectly. This allows the material to work optimally«.

\*Our contour cut eliminates the need for full-surface bonding of foam layers. The advantage: no more hardening between the layers, no increased surface tension and thus optimum pressure relief.

100%  
BACTERIA- AND VIRUS-PROOF

## MADE FOR THE CLINIC

»Our protective covers have been developed especially for us. The high bielasticity reduces friction and shear forces and the material is absolutely tight.«

Improves the sinking capacity and thus the support function of the mattress through elasticity: Our certified quality is bacteria- and virus-proof, resistant to aggressive liquids and can be treated hygienically in a variety of ways.

# UNIQUE POSITIONING

»Our range of high-quality viscoelastic positioning aids is unparalleled in terms of practicality, pressure relief and quality.«

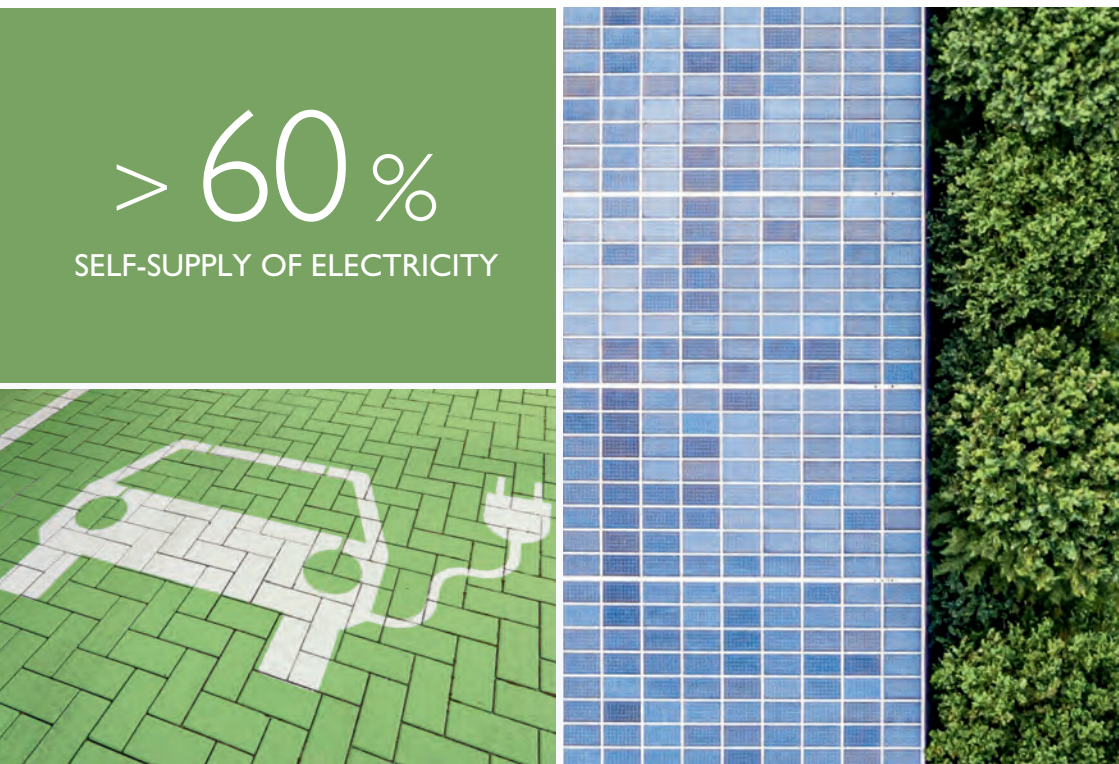

Our diverse and flexible positioning aids are just as relevant in individual patient care, as they are in structured and professional prophylaxis in order to sustainably reduce costs.

SELF-SUPPLY OF ELECTRICITY

## MODERN AND SUSTAINABLE

»We can cover more than 60% of our total energy requirements with our own photovoltaic system, wind power and battery storage.«

We operate sustainably. This includes the optimization of processes as well as the avoidance of polluting waste and emissions. And our goal of CO<sub>2</sub>-neutral production – through a completely renewable energy supply.
