Functional. Intelligent. Dignified.

## carisma sc

Low nursing bed with functionality and comfort for everyone

# Comfort and functionality for everyone

The low nursing bed carisma sc is the solution for nursing homes that strive for functionality and comfort. This innovative nursing bed was developed to optimally meet the needs of both caregivers as well as the residents in the best possible way.

With its outstanding features such as the SafeFree® side rails, which can serve as mobilisation aids and effective concepts for active falls prevention, the carisma sc offers a unique combination of safety, autonomy and well-being.

In this brochure we will give you an overview of the features and benefits of the carisma sc, which will help you to create the best possible care environment for your residents.

Learn how the carisma sc will help you to provide care of the highest level while improving your residents' comfort and quality of life.

carisma sc 360, homely –  
The low nursing bed with functionality and comfort for everyone

- Individual mobilisation
- Effective falls prevention
- Care ergonomics
- Comfort for residents

# At a glance

The most important features of the carisma sc

The optional LED reading lamp provides additional comfort.

1 | The safe sleeping height of 25 cm minimizes the risk of serious injuries due to falls.

2 | The unique Ergoframe®-technology (double retraction) increases the space available in the pelvic area by 16 cm.

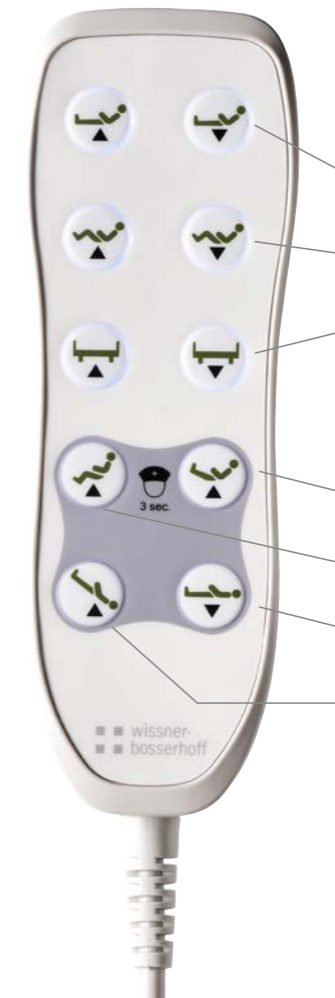

4 | The proven SafeFree® side rails support mobilisation and offer individual falls prevention without restricting.

5 | An optional bed-exit-assistant offers individual and advanced falls prevention.

3 | The new handset offers automatic care positions, which can be locked and unlocked electronically. The backlighting and clear design round off the product.

Resident functions

Backrest adjustment

Autocontour

Height adjustment

Care functions

Prophylaxis automatic

Comfort seat automatic

CPR automatic/zero position

Trendelenburg automatic

The four care functions can be set with just one push of a button.

# Individual. Effective. Comfortable.

## Mobilise individually

Preservation and promotion of individual mobility

- Thanks to the 4 adjustable heights of the SafeFree® side rails, they can be used as a stand-up aid by small and large residents
- The optionally available SafeSense® bed-exit-system empowers autonomous self-mobilisation.
- Comfort and prophyllaxis position promote the well-being of immobile residents as well

## Nursing Ergonomics

Ergonomics in the nursing routine to support the nursing staff

- Automatic care positions can be set with just one push of a button.
- The care functions can be locked and unlocked electronically and are thus protected against unintentional operation
- The ergonomic nursing height of up to 80 cm enables back-friendly care
- An undercarriage clearance of 15 cm allows the use of various care aids
- The SafeFree® side rails ensure fast and free access to the resident

## Effective falls prevention

Falls become an overall risk with increasing age

- The safe sleeping height of 25 cm reduces the risk of serious injuries due to falls
- The head-side orientation position of the SafeFree® side rails indicates the end of the bed and can additionally support safety during the night
- The side rails can be adapted to various room concepts or individual protection needs of the resident
- The axle-mounted braking system protects against unintentional movement of the bed
- The automatic night light of the SafeSense® system provides additional orientation at night

## Comfort for residents

Homely design and functionality to make residents feel at home

- The double retraction of the Ergoframe® lying surface optimizes the space available in the seating area by 16 cm.
- The backlighting of the handset facilitates operation even in the dark
- Optional covers (fabric or imitation leather) for head and foot sections add a touch of homey comfort
- A wide range of mattresses are available to meet different needs
- The reading lamp provides additional comfort in the dark

# Accessories | Features

Digital care assistants | Innovative, digital solutions to provide support for both individual care activities and complex care processes

## SafeSense® | Bed-exit-assistant

### Your benefit:

- Earlier detection of falls than through routine checks
- Night light provides orientation in the dark
- Higher safety level with tightly staffed night and weekend shifts
- Nurse call with flexible timing
- Stand-alone solution with separate power supply

SafeSense® bed-exit-assistant  
What does that actually mean?

## SafeSense® 3 | Digital nursing assistant

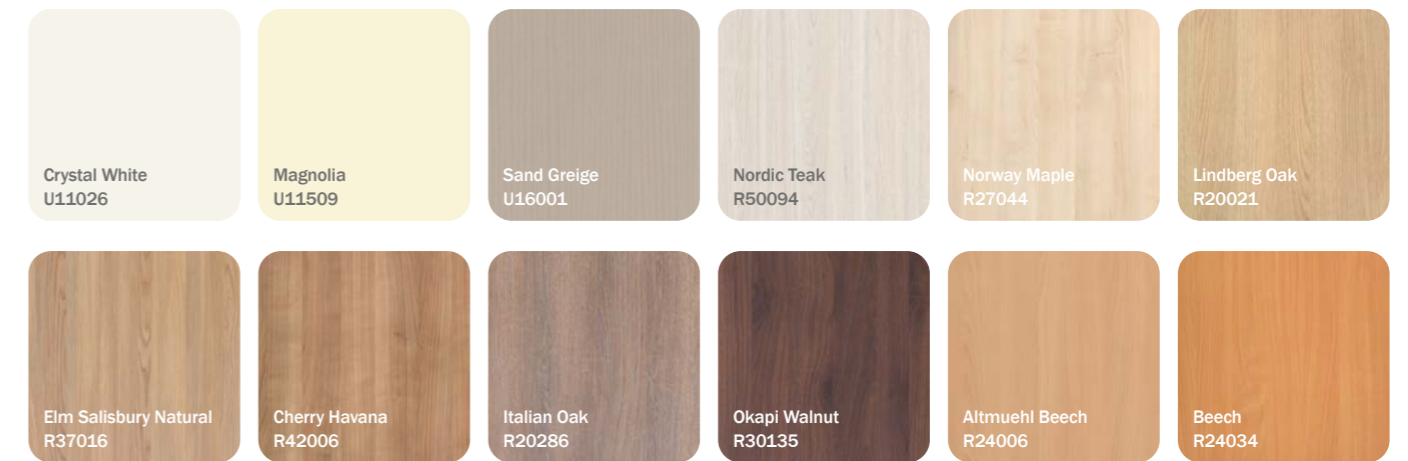

### Your benefit:

- Real-time motion monitoring for the detection of pressure ulcer risks
- Bed exit monitoring with resident-specific settings
- Nursing monitor app provides overview of all data
- Optional humidity assistant for better protection against maceration and pressure ulcers
- Stand-alone solution with separate mains connection

SafeSense® 3  
The digital care assistant explained easily!

# Colors & Design

We recommend using an original sample for final color selection, as the colors may differ from the printed images.

# Technical data
